

GT Enterprise® - The Solution

Flexible Enterprise Resource Management for Printing and Packaging

Globe-Tek is the Backbone for a Powerful, Connect System

The Core Strengths

GT Enterprise is a highly flexible, truly rules-based ERM system for Printing & Packaging providers. Its enterprise capability and on-going innovations continue to make GT Enterprise the system of choice for the most progressive medium-to-large specialty providers. Networked to your existing JDF/XML compliant systems, GT Enterprise becomes the backbone of one, very powerful, company-wide system.

Fit

- Tailoring with flexible rules
- Unique shared enhancement program
- Item-based production, finished goods, & kitting
- Gang and Combo Wizard
- Die and cylinder management
- RMA and tracking to the roll/run

Flexibility

- Multiple, user-definable units of measure
- Multiple market sectors supported per plant
- Multilingual and multicurrency
- Multiple plant capability with 1000+ user support
- Fine-grain, plant-specific permissions

Automation (modules, mini-servers, & wizards)

- RFO (automated forecasting & order entry)
- Production Distribution Management
- Raw Material Production Requisitions
- Stock Movement and Receipts
- Delivery Confirmation and Invoicing
- Issues and Returns of Issues
- Term Billing, AR Payment, & AP Invoice

Connectivity

- JDF-compliant prepress, press, & postpress
- Remote VIM, order entry, forecasting, reporting
- Automated (Electronic) data collection
- Accounting and payroll systems

The Main Features

Estimating & Quoting

- Build estimates easily using item-based processes
- Customize quotes using unlimited business rules
- Create, predate, & track price lists per item/class
- Create flexible multi-part estimates & quotes
- Manage and track dies & cylinders with visuals
- Track and recover extra charges effecting ROI
- Create schedule & plant workflows from estimates

Planning & Order Entry

- Build orders easily with item-based processes
- Customize orders using unlimited business rules
- Digital visibility through the attachment feature
- Clients can create requests for orders remotely
- Automatically generate orders from XML data
- Easily combine jobs and customers on a single press run with Combo Wizard.
- Manage complex jobs campaigns
- Create Requests for Raw Materials Production
- Automatically load jobs into the schedule

Scheduling

- Load jobs automatically during order entry
- Split runs with different times, or in parallel
- Schedule around black-outs and holidays
- Produce workload, capacity & overload graphs
- Freeze, save, and recall old schedules

Purchasing / Receiving

- Requisition material automatically at order entry
- Search for open purchase orders easily
- Compare vendor cost and lead time
- Track skid or roll by serial number and weight

Data Collection

- Quickly navigate with our touch-screen interface
- Access job ticket, materials, schedules & notes
- Efficiently manage many concurrent operations
- Interface with automated data collection systems

Job Tracking, Costing & Reporting

- Track job status from entry to shipments
- Graphically display real-time routing
- Effectively enter, track, and manage proofs
- Perform detailed graphical cost analysis by customer, salesperson, product, industry, or area
- Access reports remotely with Report Dispatcher

Inventory & Fulfillment

- Manage inventory efficiently across plants
- Track and audit stock by lot, roll, carton, or skid
- Automate movements, issues, returns of issues
- Print labels on receipt, skid, roll, plate, and stock
- Track multiple releases by quantity and date
- Organize and manage complex, date-sensitive jobs through a complete distribution module
- Manage returns through a complete RMA module

Accounting (AR, AP, GL, Fixed Assets)

- Automate delivery confirmation and invoicing
- Manage finished goods ownership and billing with the Term Billing Wizard
- Automate supply chain vouchers and payments with AP Payment & AR Invoice Wizards
- Automate selection & dispatch of invoices
- Automatically add extra charges to first invoice
- Validate credit at order entry & data collection
- Automatically create checks with payment stubs
- Run flexible depreciation, life expectancy, reducing balance, amortization, by frequency of turns
- Customize a full suite of financial reports

Application Wide

- Multiple, user-definable units of measure
- Manage multiple market sectors per plant
- Control multilingual and multicurrency use
- Support 1-1000+ concurrent users
- Manage fine-grain, plant-specific permissions
